13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work)
- "In compliance with the stated objectives of the Federal Regulations for Onshore Oil & Gas Operations and the applicable Federal Unit Agreement, Questar Exploration and Production Company hereby requests the commingling of production between intervals in the WRU-EIH 9MU 35-8-22. Questar considers this commingling to be in the public interest in that it promotes maximum ultimate economic recovery, prevents waste, provides for orderly and efficient production of oil and gas and presents no detrimental effects from commingling the two gas streams. Questar requests approval for the commingling between the Mesa Verde and Wasatch intervals. The proposed method to determine the allocation of production between the intervals is described below:
- 1 - Both Mesa Verde Zones located at these depths: 8282' - 8290' & 7690' - 7770' were completed and put on production. After approximately 30 days Questar evaluated the decline and assigned an EUR to the Mesa Verde Only.
- 2 - Next a plug is set above the Mesa Verde and all 3 Wasatch Zones located @ 7479' - 7495', 5859' - 5864' & 5851' - 5857' are completed and put on production. After approximately 30 days Questar evaluated the decline and assigned an EUR to the Wasatch only. The Wasatch and Mesa Verde Zones are then commingled. At that time a gas sample will be taken and analyzed to serve as a baseline.
- 3 - The initial allocation is being estimated from the individual EUR's of the Mesa Verde and Wasatch formation. That allocation would be:
- Mesa Verde Production: 13% - for an EUR of 144 MMCF.
- Wasatch Production: 87% - for an EUR of 957 MMCF.
- 4 - On an annual basis the gas will be sampled and a determination will be made of the BTU content and gas constituents. These annual samples can be used to determine if the gas pool production is changing over time and if the allocation needs to be changed. If these samples do not indicate that any adjustments in allocation are necessary they may be discontinued after the fifth anniversary of the initial production.
